### **DETAILED ACTION**

The examiner acknowledges receipt of IDS filed 7/02/01.

#### ***Specification***

#### ***Claim Objections***

1. Claims 4-8 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-8 not been further treated on the merits.

#### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-2, 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1-2, 9 are indefinite because Applicants do not clearly define “substantially” in the claims. Clarification is requested.

4. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the elements described in the specific examples.

#### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1615

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Wallace et al. (EP 0251695).

Wallace discloses an injectable suspensions of biomaterials, such as cross-linked collagen, that contain a biocompatible fluid lubricant, such as glycogen or maltose. The inclusion of the lubricant significantly improves the intrusion of the suspension into soft tissue (see abstract). Example 4 discloses cross-linked collagen with glycerol or maltose. Claims 1-3 disclose an injectable implant composition for soft tissue augmentation comprising an aqueous suspension of a particulate biomaterial and sufficient amount of a biocompatible fluid lubricant, wherein the particulate biomaterial is fibrillar cross-linked collagen, having diameters in the range of about 1 to 20 microns. Therefore, these claims are anticipated.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
